

“Education for Knowledge ,Science and Culture”

Shikshanmaharshi Dr. Bapuji Salunkhe

**VIVEKANAND COLLEGE (AUTONOMOUS) ,KOLHAPUR.**

**B.Sc. Part I CBCS Syllabus with effect from June 2018**

**Semester : I Statistics Paper –I**

**STATISTICS –DSC -1004 A**

**DESCRIPTIVE STATISTICS –I & ELEMENTARY PROBABILITY THEORY**

**Theory : 60 Hours (75 Lectures) Credits – 4 (80 Marks)**

### **Section I- DESCRIPTIVE STATISTICS –I**

#### **OBJECTIVES:**

The main objective of this course is to acquaint students with some basic concepts in statistics. They will be introduced to some elementary statistical methods of analysis of data and at the end of this course students are expected to be able,

- 1) To compute various measures of central tendencies, dispersion, moments, skewness, kurtosis and to interpret them.
- 2) To analyze data pertaining to attributes and to interpret the results.

#### **CONTENTS:**

##### **Unit 1: Introduction to Statistics & Measures of Central Tendency ( 13 Lectures of 48 mins)**

- 1.1 : Meaning of primary and secondary data. Qualitative data (Attributes): nominal and ordinal scale. Quantitative data (Variables): Interval and ratio scale, discrete and continuous variables, raw data.
- 1.2 : Population & Sampling Methods- Simple Random Sampling, Stratified Random Sampling, Systematic Sampling, Advantages of Sampling.
- 1.3 : Concept of Central tendency of statistical data, Statistical average, Requirements of good statistical average.
- 1.4 : **Arithmetic Mean (A.M):** Definition)Effect of change of origin and scale,(i)Sum of Deviation of observations from A.M is zero. (ii) Sum of squares Deviation of observations from A.M is ,minimum, (iii) Combined mean of k series( prove for two series and generalize for k series) Weighted A.M.
- 1.5 : **Geometric Mean (G.M):** Definition, Properties: i) G. M. of pooled data (for two groups), ii) G. M. of ratio of two series, is the ratio of their G. M's.
- 1.6 : **Harmonic Mean (H.M.):** Definition, Relation:  $A.M \geq G.M \geq H.M$  (proof for  $n = 2$  positive observations).
- 1.7 : **Median:** Definition, Derivation of formula for grouped frequency distribution.
- 1.8 : **Mode:** Definition, Derivation of formula for grouped frequency distribution. Empirical relation between Mean, Median and Mode. Graphical method of determination of Median and Mode.
- 1.9 : **Partition values** Quartiles, Deciles and Percentiles,
- 1.10 : Comparison between averages in accordance with requirements of good average.

1.11 : Situations where one kind of average is preferable to others.

## **Unit 2. Measures of Dispersion: ( 12 Lectures of 48 mins )**

2.1 : Concept of dispersion, Absolute and Relative measures of dispersion, Requirements of a good measure of dispersion.

2.2 : Range: Definition, Coefficient of range, Use in SQC.

2.3 : Quartile Deviation (Semi-inter quartile range): Definition, Coefficient of Q.D.

2.4 : Mean Deviation: Definition, Coefficient of M.D., Minimal property of M.D.

2.5 : Mean Square Deviation: Definition, Minimal property of M.S.D.

2.6 : Variance and Standard Deviation: Definition, Effect of change of origin and scale, S.D. of pooled data (proof for two groups).

2.7 : Coefficient of Variation: Definition and use.

2.8 : Comparison of S.D. with other measures.

## **Unit 3. Moments, Skewness and Kurtosis: (6 Lectures of 48 mins)**

3.1 : Moments: Raw moments ( $\mu_r'$ ) and Central moments ( $\mu_r$ ) for ungrouped and grouped data.

3.2 : Effect of change of origin and scale on central moments, relation between central moments and raw moments (up to 4th order).

3.3 : Sheppard's corrections.

3.4 : Skewness: Concept of skewness of a frequency distribution, Types of skewness.

3.5 : Bowley's coefficient of skewness, Karl Pearson's coefficient of skewness, Measure of skewness based on moments.

3.6 : Kurtosis: Concept of kurtosis of a frequency distribution, Types of kurtosis.

3.7 : Measure of kurtosis based on moments.

## **Unit-4. Theory of Attributes (5 Lectures of 48 mins )**

4.1: Attributes: Notation, dichotomy, class frequency, order of class, positive and negative class frequency, ultimate class frequency, fundamental set of class frequency, relationships among different class frequencies (up to three attributes).

4.2: Concept of Consistency, conditions of consistency (up to three attributes).

4.3: Concept of Independence and Association of two attributes.

4.4: Yule's coefficient of association (Q): Definition, interpretation. Coefficient of colligation (Y): Definition, interpretation. Relation between Q and Y:  $Q = 2Y / (1+Y^2)$ ,  $|Q| \geq |Y|$ .

4.5: Illustrative examples

## **Books Recommended**

1. Bhat B. R., Srivenkatramana T. and Madhava Rao K. S. (1996): Statistics: A Beginner's Text, Vol. 1, New Age International (P) Ltd.
2. Croxton F. E., Cowden D.J. and Kelin S. (1973): Applied General Statistics, Prentice Hall of India.

3. Goon A.M., Gupta M.K., and Dasgupta B.: Fundamentals of Statistics Vol. I and II, World Press, Calcutta.
4. Gupta S. P. (2002): Statistical Methods, Sultan Chand and Sons, New Delhi.
5. Snedecor G.W. and Cochran W. G. (1967): Statistical Methods, Iowa State University Press.
6. Waiker and Lev.: Elementary Statistical Methods.
7. Gupta V.K. & Kapoor S.C. Fundamentals of Mathematical Statistics.- Sultan & Chand

## **Section- II ELEMENTARY PROBABILITY THEORY**

### **OBJECTIVES:**

The main objective of this course is to acquaint students with some basic concepts of probability, axiomatic theory of probability, concept of random variable, probability distribution (univariate and bivariate). By the end of this course students are expected to be able,

- 1) To distinguish between random and non-random experiments.
- 2) To find the probabilities of various events.

### **CONTENTS:**

#### **Unit-1. Sample space and Events: (8 Lectures of 48 min)**

- 1.1: Concepts of experiments and random experiments.
- 1.2: Definitions: Sample space, Discrete sample space (finite and countably infinite), Event, Elementary event, Compound event, favourable event.
- 1.3: Algebra of events (Union, Intersection, Complementation).
- 1.4: Definitions of Mutually exclusive events, Exhaustive events, Impossible events, Certain event.
- 1.5: Power set  $|P(\Omega)$  (sample space consisting at most 3 sample points).
- 1.6: Symbolic representation of given events and description of events in symbolic form.
- 1.7: Illustrative examples.

#### **Unit-2. Probability: (10 Lectures of 48 min)**

- 2.1: Equally likely outcomes (events), apriori (classical) definition of probability of an event. Equiprobable sample space, simple examples of computation of probability of the events based on Permutations and Combinations.
- 2.2: Axiomatic definition of probability with reference to a finite and countably infinite sample space.
- 2.3: Proof of the results:
  - i)  $P(\Phi) = 0$ , ii)  $P(A^c) = 1 - P(A)$ ,
  - iii)  $P(A \cup B) = P(A) + P(B) - P(A \cap B)$  (with proof) and its generalization (Statement only).
  - iv) If  $A \subset B$ ,  $P(A) \leq P(B)$ , v)  $0 \leq P(A \cap B) \leq P(A) \leq P(A \cup B) \leq P(A) + P(B)$ .
- 2.4: Definition of probability in terms of odd ratio.
- 2.5: Illustrative examples based on results in (2.3) and (2.4) .

#### **Unit-3. Conditional Probability & Independence of events: (6 Lectures of 48 min)**

- 3.1: Definition of conditional probability of an event.
- 3.2: Multiplication theorem for two events. Examples on conditional probability.
- 3.3: Partition of sample space.
- 3.4: Idea of Posteriori probability, Statement and proof of Baye's theorem, examples on Baye's theorem.
- 3.5: Concept of Independence of two events.
- 3.6: Proof of the result that if A and B are independent then, i) A and  $B^c$ , ii)  $A^c$  and B  
iii)  $A^c$  and  $B^c$  are independent.
- 3.7: Pairwise and Mutual Independence for three events.
- 3.8: Elementary examples.

#### **Unit-4. Univariate Probability Distributions (finite sample space): (12 Lectures of 48 min)**

- 4.1: Definition of discrete random variable.
- 4.2: Probability mass function (p.m.f.) and cumulative distribution function (c.d.f.) of a discrete random variable, Properties of c.d.f. (statements only).
- 4.3: Probability distribution of function of random variable.
- 4.4: Median and Mode of a univariate discrete probability distribution.

#### **Mathematical Expectation :**

- 4.5: Definition of expectation of a random variable, expectation of a function of a random variable.
- 4.6: Results on expectation, i)  $E(c) = c$ , where  $c$  is a constant,  
ii)  $E(aX + b) = a E(X) + b$ , where  $a$  and  $b$  are constants.
- 4.7: Definitions of mean, variance of univariate distributions. Effect of change of origin and scale on mean and variance.
- 4.8: Definition of raw, central moments. Pearson's coefficient of skewness, kurtosis.
- 4.9: Definition of probability generating function (p.g.f.) of a random variable. Effect of change of origin and scale on p.g.f. Definition of mean and variance by using p.g.f.
- 4.10: Examples.

#### **Books Recommended:**

1. Bhat B. R., Srivenkatramana T and Madhava Rao K. S. (1997): Statistics: a Beginner's Text, Vol. II, New Age International (P) Ltd.
2. Edward P. J., Ford J. S. and Lin (1974): Probability for Statistical Decision-Making, Prentice Hall.
3. Goon A. M., Gupta M. K., Das Gupta B. (1999): Fundamentals of Statistics, Vol.II, World Press, Calcutta.
4. Mood A. m., Graybill F. A. and Boes D. C. (1974): Introduction to the Theory of

Statistics, McGraw Hill.

5. Hogg R. V. and Crag R. G.: Introduction to Mathematical Statistics Ed.4.
6. Hoel P. G. (1971): Introduction to Mathematical Statistics, Asia Publishing House.
7. Meyer P.L.(1970): Introductory Probability and Statistical Applications, Addison Wesley.
8. Rohatgi V. K. and Saleh A. K. Md. E. (2002): An Introduction to probability and statistics. John wiley & Sons (Asia)
9. Gupta V.K. & Kapoor S.C. Fundamentals of Mathematical Statistics.- Sultan & Chand
10. Mukhopadhyay P. (2006) : Probability. Books and Allied (P) Ltd

**Note:** 1. In theory examination, the weight age to the numerical problems should not exceed 40%.

2. Students can use scientific calculators in theory examination.

**Group Activity A (20 Marks)**

- Collect univariate & qualitative data (in groups) , its analysis based on the above practical and theory -15 marks
- Presence for Group Activity -05 marks

Semester : II Statistics Paper –II

**STATISTICS –DSC -1004 B**

**DESCRIPTIVE STATISTICS –II & DISCRETE PROBABILITY DISTRIBUTIONS**

**Theory : 60 Hours (75 Lectures) Credits – 4 (80 Marks)**

**Section I- DESCRIPTIVE STATISTICS –II**

**OBJECTIVES:**

The main objective of this course is to acquaint students with some basic concepts in statistics. They will be introduced to some elementary statistical methods of analysis of data and at the end of this course students are expected to be able,

- 1) To compute correlation coefficient, interpret its value and use in regression analysis
- 2) Understand concept of multivariate distributions.

**Unit-1. Correlation: (6 Lectures of 48 mins)**

- 1.1: : Bivariate Random variable (X,Y), Bivariate data, Formation of bivariate frequency distribution
- 1..2: Definition of Marginal totals, Mean of X, Mean of Y, Variance of X, Variance of Y, Covariance of XY.
- 1.3: Effect of change of origin and scale on covariance.
- 1.4: Theoretical examples.

- 1.5: Concept of correlation between two variables, Types of correlation.
- 1.6: Scatter diagram, its utility.
- 1.7: Karl Pearson's coefficient of correlation ( $r$ ): Definition, Computation for ungrouped and grouped data, Properties : i)  $-1 \leq r \leq 1$ , ii) Effect of change of origin and scale.(iii) Interpretation when  $r = -1, 0, 1$ .
- 1.8: Spearman's rank correlation coefficient: Definition, Computation (for with and without ties). Derivation of the formula for without ties and modification of the formula for with ties.

### **Unit-2. Regression: (6 Lectures of 48 mins)**

- 2.1: Concept of regression, Lines of regression, Fitting of lines of regression by the least square method.
- 2.2: Regression coefficients ( $b_{xy}, b_{yx}$ ) and their geometric interpretations, Properties: i)  $b_{xy} \times b_{yx} = r^2$ , ii)  $b_{xy} \times b_{yx} \leq 1$ , iii)  $(b_{xy} + b_{yx}) / 2 \geq r$ , iv) Effect of change of origin and scale on regression coefficients, v) the point of intersection of two regression lines.
- 2.3: Derivation of acute angle between the two lines of regression.
- 2.4: Coefficient of determination.

### **Unit-3: Multiple Linear Regression Multiple and Partial Correlation (for trivariate data only (18 Lectures of 48 mins)**

- 3.1 Concept of multiple linear regression, Plane of regression, Yule's notation, correlation matrix.
- 3.2 Fitting of regression plane by method of least squares, definition of partial regression coefficients and their interpretation.
- 3.3 Residual: definition, order, properties, derivation of mean and variance, Covariance between residuals.
- 4.1 Concept of multiple correlations. Definition of multiple correlation coefficient  $R_{i.jk}$ , derivation of formula for multiple correlation coefficient.
- 4.2 Properties of multiple correlation coefficient; i)  $0 \leq R_{i.jk} \leq 1$ , (ii)  $R_{i.jk} > |r_{ij}|$ , (iii)  $R_{i.jk} > |r_{ik}|$   $i = j = k = 1, 2, 3$ .  $i \neq j, i \neq k$ .
- 4.3 Interpretation of  $R_{i.jk} = 1, R_{i.jk} = 0$ , coefficient of multiple determination  $R^2_{1.23}$ .
- 4.4 Concept of partial correlation. Definition of partial correlation coefficient  $r_{ij.k}$ , derivation of formula for  $r_{ij.k}$ .
- 4.5 Properties of partial correlation coefficient (i)  $-1 \leq r_{ij.k} \leq 1$ , (ii)  $b_{ij.k} \cdot b_{ji.k} = r^2_{ij.k}$ .
- 4.6 Examples and problems.

### **Unit 4: Time Series: (6 Lectures of 48 mins)**

- 1.1: Meaning and need of time series analysis, components of times (i) Secular trend (ii) Seasonal Variation (iii) Cyclical Variation (iv) Irregular Variation, Additive and Multiplicative model, utility of time series.
- 1.2: Measurement of trend: (i) Moving averages method (ii) Progressive average method (iii) Least square method. (iv) Measurement of seasonal indices by simple average method.

### **Books Recommended**

1. Bhat B. R., Srivenkatramana T. and Madhava Rao K. S. (1996): Statistics: A Beginner's Text, Vol. 1, New Age International (P) Ltd.

2. Croxton F. E., Cowden D.J. and Kelin S. (1973): Applied General Statistics, Prentice Hall of India.

8. Gupta V.K. & Kapoor S.C. Fundamentals of Mathematical Statistics.- Sultan & Chand

## **Section II - DISCRETE PROBABILITY DISTRIBUTIONS**

### **OBJECTIVES:**

The main objective of this course is to acquaint students with some basic concepts of probability, axiomatic theory of probability, concept of random variable, probability distribution (univariate). By the end of this course students are expected to be able,

- 1) To apply discrete probability distributions studied in this course in different situations.
- 2) Distinguish between discrete variables and study of their distributions.
- 3) Know some standard discrete probability distributions with real life situations.
- 4) Understand concept of bivariate distributions and computation of related probabilities.

### **Unit-1. Some Standard Discrete Probability Distributions- I: (finite sample space):**

**(05 Lectures of 48 min)**

- 1.1: Idea of **one point, two point** distributions and their mean and variances.
- 1.2: **Bernoulli Distribution:** p.m.f., mean, variance, distribution of sum of independent and identically distributed Bernoulli variables.
- 1.3: **Discrete Uniform Distribution:** p.m.f., mean and variance.

### **Unit-2. Some Standard Discrete Probability Distributions- II: (finite sample space):**

**(09 Lectures of 48 min)**

- 2.1: **Binomial Distribution:** Binomial random variable, p.m.f. with parameters (n, p), Recurrence relation for successive probabilities, Computation of probabilities of different events, mean and variance, mode, skewness, p.g.f., Additive property of binomial variates. Examples.
- 2.2: **Hyper geometric Distribution:** p.m.f. with parameters (N, M, n), Computation of probability of different events, Recurrence relation for successive probabilities, mean and variance of distribution assuming  $n \leq N - M \leq M$ , approximation of Hypergeometric to Binomial. Examples.

### **Unit-3: Discrete Distributions: Poisson, Geometric and Negative Binomial Distribution (countably infinite sample space): (10 Lectures of 48 min)**

3.1: Definition of random variable (defined on countably infinite sample space)

3.2: Poisson Distribution: Definition of Poisson with parameter  $\lambda$ . Mean, variance, probability generating function (p.g.f.). Recurrence relation for successive Probabilities, Additive property of Poisson distribution. Poisson distribution as a limiting case of Binomial distribution, examples.

3.3: Geometric Distribution: Definition of Geometric with parameter  $p$ . Mean, Variance, distribution function, p.g.f., Lack of memory property, examples.

3.4: Negative Binomial Distribution: Definition of Negative Binomial with parameters  $(k, p)$ , Geometric distribution is a particular case of Negative Binomial distribution, Mean, Variance, p.g.f., Recurrence relation for successive probabilities, examples.

### **Unit-4. Bivariate Discrete Probability Distributions: (12 Lectures of 48 min)**

4.1: Definition of bivariate discrete random variable  $(X, Y)$  on finite sample space, Joint p.m.f., and c.d.f., Properties of c.d.f. (without proof). Computation of probabilities of events in bivariate probability distribution, concept of marginal and conditional probability distribution, independence of two discrete r.v.s, Examples.

4.2 : Mathematical Expectation: Definition of expectation of function of r.v. in bivariate distribution, Theorems on expectations: (i)  $E(X+Y) = E(X) + E(Y)$  (ii)  $E(XY) = E(X) \cdot E(Y)$  when  $X$  and  $Y$  are independent, expectation and variance of linear combination of two discrete r.v.s., definition of conditional mean, conditional variance, covariance and correlation coefficient,  $Cov(aX+bY, cX+dY)$ , distinction between uncorrelated and independent variables, joint p.g.f, proof of the p.g.f. of sum of two independent r.v.as the product of their p.g.f. examples.

#### **Books Recommended:**

1. Bhat B. R., Srivenkatramana T and Madhava Rao K. S. (1997): Statistics: a Beginner's Text, Vol. II, New Age International (P) Ltd.
2. Edward P. J., Ford J. S. and Lin (1974): Probability for Statistical Decision-Making, Prentice Hall.
3. Goon A. M., Gupta M. K., Das Gupta B. (1999): Fundamentals of Statistics, Vol.II, World Press, Calcutta.
4. Mood A. m., Graybill F. A. and Boes D. C. (1974): Introduction to the Theory of Statistics, McGraw Hill.
5. Hogg R. V. and Crag R. G.: Introduction to Mathematical Statistics Ed.4.
6. Hoel P. G. (1971): Introduction to Mathematical Statistics, Asia Publishing House.
7. Meyer P. L. (1970): Introductory Probability and Statistical Applications, Addison

Wesley.

8. Rohatgi V. K. and Saleh A. K. Md. E. (2002): An Introduction to probability and statistics. John Wiley & Sons (Asia)

**Note:** 1. In theory examination, the weightage to the numerical problems should not exceed 40%.

2. Students can use scientific calculators in theory examination.

**Group Activity B (20 Marks)**

- Collect Bivariate/ Trivariate data, Time series data(in groups) , its analysis based on the above practical and theory -15 marks
- Presence for Group Activity -05 marks

**STATISTICS LAB(I) –DSC -1004 A**

**DESCRIPTIVE STATISTICS II & DISCRETE PROBABILITY DISTRIBUTIONS  
60 Hours (75 Lectures) Credits – 2**

**Pre requisites:** Knowledge of the topics in the theory papers.

**Objectives:** At the end of this course students are expected to be able-

1. To represent statistical data diagrammatically and graphically.
2. To compute various measures of central tendency, dispersion, moments, skewness and kurtosis.
- 3. To identify sample space and compute basic probabilities.**

**List of Practicals:**

**Sem I**

1. Graphical presentation of the frequency distribution (Histogram, frequency polygon, frequency curve, Location of Mode, Ogive curves, Location of Partition values).
2. Measures of Central Tendency for both ungrouped and grouped data.
3. Measures of the Dispersion for both ungrouped and grouped data.
4. Moments, Skewness & Kurtosis for both ungrouped and grouped data.
5. Using MS-EXCEL: Diagrammatic and Graphical presentation, Compute A.M., G.M., H.M., Variance, C.V., M.D. Moments
6. Probability-I (Sample space, favourable points, computation of simple probability based on sets on Chapter 1 &2)
7. Probability-II (based on Chapter 3 & 4)

## STATISTICS LAB(II) –DSC -1004 B

### DESCRIPTIVE STATISTICS II & DISCRETE PROBABILITY DISTRIBUTIONS 60 Hours (75 Lectures) Credits – 2

**Pre requisites:** Knowledge of the topics in the theory papers.

**Objectives:** At the end of this course students are expected to be able-

1. To compute correlation coefficient, regression coefficients, multiple and partial correlation coefficient interpret the results.
- 2 To analyze the time series data and comment.
3. To interpret summary Statistics of computer output.
4. To know applications of some standard discrete probability distributions.

#### List of practical

1. Correlation coefficient and Spearman's Rank correlation (ungrouped and grouped data)
2. Simple Regression for both ungrouped and grouped data.
3. Multiple regression for trivariate data only.
4. Multiple and partial correlation coefficients.
5. Time series
6. Bivariate Discrete distribution ( Computations of probabilities, Expectations and Variances)
7. Applications of Binomial and Hyper-geometric Distribution
- 8.Applications of Poisson, Geometric and Negative-Binomial Distribution
- 9 .Using MS-Excel : Applications of distributions with MS-Excel.
10. Using MS-EXCEL: Correlation and Regression (ungrouped data). Fitting of curves

#### Notes:

- i) Elementary statistical analysis using MS-Excel: Numerical computations and computations using library functions.
- ii) Knowledge of MS-EXCEL Spreadsheet should be tested on computers at the time of Viva-Voce.
- iii) Student must complete all the practicals to the satisfaction of the teacher concerned.
- iv) Students must produce laboratory journal along with completion certificate signed by Head of the Department, at the time of practical examination.

#### Laboratory Requirements:

Laboratory should be well equipped with sufficient number of electronic calculators and computers along with necessary Software's, UPS and Printers. 10

**Nature of Practical Question Paper of Statistics, B. Sc. I**

- a) In the practical question paper there shall be four questions each of twenty marks, a student has to attempt any two questions. In only one of the four questions there shall be a sub-question of about 5 marks based on MS-EXCEL.
- b) Evaluation of the MS-EXCEL based questions will be online and should be demonstrated to examiner.
- c) 5 marks are reserved for the journal and 5 marks for the oral examination.
- d) Practical examination is of four hours duration which includes viva examination and on line demonstration.
