**VIVEKANAND COLLEGE, KOLHAPUR
(AUTONOMOUS)**

DEPARTMENT OF MICROBIOLOGY

2019-2020

VALUE ADDED COURSE

**INDUSTRIAL POLLUTION CONTROL AND WASTE
TREATMENT TECHNOLOGY**

VALUE ADDED COURSE

**AFTER COMPLETION OF THIS COURSE, THE
STUDENTS WILL BE ABLE TO:**

- 1. USE WASTE WATER TREATMENT
TECHNOLOGIES**
- 2. UNDERSTAND THE IMPACTS OF POLLUTION
ON ENVIRONMENT**

LIMITED SEATS

Value Added Course 2019-2020

"Waste Water Management"

Sr. No.	Heading	Particulars
1	Title of the Course	Industrial Pollution control and waste treatment technology
2	Eligibility for Admission	Candidate who passed 10+2 examination with at least 45% marks in aggregate in Arts/ Commerce/ Science
3	Passing Marks for the course	The candidate must obtain 35 % of the total marks in theory and practical separately to pass the course.
4	Level	Add-on
5	Pattern	Trimester
6	Intake Capacity	40
7	Fees	Rs. 500/-
8	Job opportunities	Sugar industry , Dairy industry ETP, Government and Private sectors
9	To be implemented from the Academic Year	From Academic Year -June 2019-2020
10	Course Co-ordinator	Mr.S.D.Gabale (9970191188)

The present add on course is framed to give sound knowledge with understanding of industrial sector pollution problems and waste water treatment technologies to the student. The goal of the syllabus is to implement career oriented education and skills to student interested in directly entering the industrial workforce.

❖ Course outcomes:

After completion of the course, the students will be able to:

- 1) Acquire skills required in various industries, research labs and in the field of water testing laboratories.
- 2) Understand physico-chemical properties of waste water
- 3) Understand basic and advanced concepts in waste water treatment technologies.
- 4) Apply techniques for determination of characteristics of water.

Title of the course: Waste water management

Total Lectures: 40

Total Marks: 100

THEORY

UNIT-I

Lecture 10

- Physical and chemical characters of waste-
Liquid waste-pH, electrical conductivity, COD, BOD, total solid, total dissolved solids, total volatile solids, total suspended solids, chlorides, sulphates, oils & grease.
Solid waste-pH, electrical conductivity, total volatile solids ash
- Permissible limits of waste generated by-
Sugar industry, Distillery, Dairy, Paper & pulp industries, Textile industries

UNIT-II

Lecture 10

Bioremediation

- Concepts in Bioremediation
Contaminant, xenobiotic, bioaccumulation, biomagnifications, bioaugmentation, consortium, phytoaccumulation, phytoextraction, recalcitration, biotransformation.
- Xenobiotics- concepts, persistence & biomagnifications of xenobiotic molecules. Use of microbes and plants in biodegradation and biotransformation.
- Concept and types of biodegradation.
- Water pollution monitoring-
Biological methods- DO, BOD, SPC.
Chemical methods- COD, pH, TSS, TDS, TS, TVS.

Waste Water Treatment Technology

- Important terminologies in waste treatments systems- Sludge, aerobic treatment, anaerobic treatment, bioengineering, biosolids, clarifiers.
- Waste water treatment systems

Primary, secondary & tertiary treatment methods.

- management of hazardous waste .
- Use of microbial system, root zone technology, reclamation of wasteland, biogas.
- Sludge disposal-
Effect of sludge on environment, methods of sludge disposal.

Books recommended:

- 1) Advances in biotechnological Process; MMizrahi & Wezel.
- 2) Biodegradation and Bioremediation. Academic Press; 2nd edition, Martin Alexander.
- 3) Milton Wainwright. An Introduction to Environmental Biotechnology, Kluwer.

Practical's

Hours 100

Sr. No.	Particulars
1.	Study of laboratory equipments and instruments.
2.	Study of compound microscope.
3.	Cleaning & sterilization of glass wares
4.	Determination of physical parameters of waste water- Temperature, color, odor, pH
5.	Determination of total dissolved solids.
6.	Detection of E.C. of wastewater
7.	Determination of chlorides of wastewater
8.	Determination of alkalinity of wastewater
9.	Determination of DO of waste water
10.	Determination of BOD
11.	Determination of COD
12.	Determination of oil & grease from waste
13.	Determination of SPC of different waste
14.	Preparation of cultural media and its sterilization
15.	Determination of fecal contamination of water – Qualitative & Quantitative estimation.
16.	Techniques of microbial culture cultivation

Assessment:**Term End Theory Assessment –100 marks**

1. Duration - These examinations shall be of three hours duration.

2. Theory question paper pattern:-
- There shall be 20 multiple choice questions each of 1 mark. Five multiple choice questions from each unit.
 - There shall be four major questions one from each unit. All questions shall be compulsory with internal choice within the questions. Each question will be of 40 marks with options.
 - Questions may be sub divided into sub questions a, b, c & d only, each carrying 10 marks and allocation of marks depends on the weightage of the topic.

Practical Examination Pattern: Annual

Sr. No.	Particulars	Marks
1.	Laboratory work	80
2.	Journal	10
3.	Field Visit	10

Field visits-

Visit to ETP of Sugar industries

Visit to ETP of Dairy industries

Visit to ETP of distillery industries

Visit to sewage treatment plant

Books recommended for practical:

- 1) APHA (American Public Health Association) Handbook, 1998
- 2) Soil, Plant, Water analysis- P.C. Jaiswal
- 3) Chemical and biological analysis of water- Dr. R. K. Trivedi and P.K. Goel
- 4) Practical Biochemistry- J. Jayaraman

“Industrial Pollution control and waste treatment technology”
Theory Examination 2019-2020

Date: 2nd Jan., 2020

Total marks- 100

Time- 9.00am to 12.00pm

- Instructions:** 1) All questions are compulsory
2) Draw neat labeled diagram wherever necessary.
3) Figures to the right indicates full marks

-
- Q.1 Rewrite the sentence by choosing most correct alternative from the given alternatives. 20**
- i. In Air pollution act no. of sections are involved.
a) 54 b) 26 c) 34 d) 56
- ii. The amount of oxygen required for oxidation of organic matter by Microorganisms is known as.....
a) Dissolved Oxygen b) BOD c) COD d) Total organic count
- iii. The complete description of environment is involved in.....
a) Baseline studies b) Identification of impacts c) Prediction of impacts d) Evaluation of impacts
- iv. Total viable microbial count can be determined by using..... method.
a) DMC b) SPC c) COD d) BOD
- v. The process of removal of environmental pollutants from soil, air, water using micro-organisms is called.....
a) Bioaccumulation b) Bioremediation c) Phyto-extraction d) Biotransformation
- vi. Environment protection act was enacted in the year.....
a) 1974 b) 1981 c) 1986 d) 1996
- vii. To determine COD is used as oxidising agent.
a) Pottasium sulfate b) Pottassium iodide c) Pottasium dichromate d) Sodium dichromate
- viii. Consortium is known as.....
a) Contaminant b) Xenobiotics c) Cocktail of Microorganisms d) Bioconcentration
- ix. Dissolved oxygen can be measured by using.....device.
a) Online DO meter b) Spectrophotometer c) pH meter d) Colorimeter
- x. is used to increase rate of sedimentation in water.
a) Calcium sulfate b) MgSO₄ c) Alum d) Sodium sulfate
- xi. is a physical characteristic of waste water.
a) pH b) COD c) Total alkalinity d) Temperature

Shri Swami Vivekanand Shikshan Sanstha's
VIVEKANAND COLLEGE (Autonomous), KOLHAPUR

Class B.Sc. II Div. _____ Roll No. 224 61
100

Suppliment No. _____ Subject Microbiology

Test / Tutorial No. _____

1. In air pollution act 26 no. of selection are involved.
2. The amount of oxygen required for oxidation of organic matter by micro-organisms is known as BOD.
3. The complete description of environment is involved in Evaluation of impacts.
4. Total viable microbial count can be determined by using SPC method.
5. The process of removal of environmental pollutants from soil, air, water using micro-organisms is called Bioremediation.
6. Environment protection act was enacted in the year 1986.
7. To determine COD Potassium dichromate is used as oxidising agent.
8. Consortium is known as cocktail of micro-organisms.

9. Dissolved oxygen can be measured by using online DO meter.

10. MgSO₄ is used to increase rate of sedimentation in water.

11. Total alkalinity is a physical characteristic of waste water.

12. Any solid, liquid or gaseous substance present in such a concentration which may be injurious to environment is called environmental pollutant.

13. All of above method indirectly measured concentration of organic compounds in water.

14. In anaerobic digestion treatment process CH₄ gas is generated.

15. Trickling filter is an example of secondary treatment process.

16. Mulching process is used to reduce evaporation of soil by covering soil surface.

17. Quaternary treatment removes total solids present in sewage.

18. SO₂ gas is responsible for acid rain.

19. Noise pollution is measured in terms of Decibel

20. In methanogenesis process micro-organisms produce methane. 16

Q 2 (3) Environmental impact assessment:-

Environmental impact assessment is analysing or assessing with the pre planning of project, ~~that~~ industries and its positive & negative impact on environment.

Environmental impact assessment is divided in four types:-

1) Baseline Studies:-

Here the study of project deals, land, infrastructure, archaeological history of place/area is taken in consideration.

2) Identification of Impact:-

Here the resources, availability of raw material, temperature climate environment are studied.

The impacts identified may be positive or may be negative.

3) Prediction of Impact:-

Here prediction of impact means guessing are done in which some will give positive impact some may give negative impact it depends on environmental condition & type of industries or project put forth.

4) Evaluation of Impacts:-

Here the total over all studies are

taken in consideration. The impacts are evaluated and solution and precaution are also discussed to overcome or to cure the impact.

There are 4 types of impact :-

1) temporary impact :-

It is short term and can be reversed back to normal.

2) permanent impact :-

It is long lasting and cannot be reversed back to normal.

3) cumulative impact

It is combination of both may be reversed back may be not.

Evaluation is done in 3 way

1) Mathematical

2) Graphical

3) Statistical

1) Mathematical :- The cost of raw material, useful material, profit, loss, income is considered here.

2) Graphical :- The mapping of project, geographical area, archaeological history is analysed

3) Statisticals :- The over all project cost

Public participation :- Public participation of certain can give opinion about place, climate and other things.

Advantages :-

1) get information

2) can get employment.

Shri Swami Vivekanand Shikshan Sanstha's
VIVEKANAND COLLEGE (Autonomous), KOLHAPUR

Class _____ Div _____ Roll No. 224

Suppliment No. 1 Subject Microbiology

Test / Tutorial No. _____

3) Can get raw material

Disadvantage:-

1) It may be messy.

2) It may lead to great cost.

There is also another concept in public participation i.e. feed forward and feed backward.

1) feed forward is public opinion towards the project impact.

- it may be positive or negative.

2) feed backward is project owner or government officer giving feedback to public.

32. (2) Reclamation of soil:-

Reclamation of soil means making infertile barren land in fertile condition.

There are many ways to do reclamation of soil to make soil again fertile and nutritious.

Those are:-

1) strip farming:- In this method the crop farming is done in the form of strip means in horizontal form to re-nutritize the soil. By this method

forest.

3.3. Water pollution is release of unwanted pollutants in water bodies. To cure that pollution water pollution monitoring is necessary.

There are three types of biological methods.

1) dissolved oxygen

2) BOD (biological oxygen demand)

3) dSPC (standard plate count)

1) dissolved oxygen:- In the water oxygen is in dissolved form. The oxygen is used by all living entities for respiration. In oceans all aquatic animals used dissolved oxygen for metabolic processes. So if the waste from industries is released in water then there is formation of algae bloom i.e. eutrophication by which oxygen can't penetrate in water and there is oxygen depletion in water. The dissolved oxygen is measured by online DO meter. If the oxygen level is low in water then it's hard for aquatic life to survive.

2) BOD:- [Biological oxygen demand]

The oxygen amount used for biological, biochemical metabolic processes by living organism is BOD.

The BOD is counted by experimental way.

The water sample is filled in BOD bottle and incubated for 3-5 days. Because biological living organisms take more time to degrade the organic matter. After 3-5 day the sample was titrate and results were observed.

$$\text{BOD} = \frac{(A-B) \times N \times 0.025}{1000}$$

The formula is used to determine the oxygen amount used by organism.

8) SPC - standard plate count.

In this method the number of bacteria is counted. The count of viable organism is enumerated. The main principle is "one cell give rise to one colony".

Take a water sample. Dilute it with ten fold dilution. Take 1 ml sample and streak it/spread it on sterile nutrient agar plate. Incubate the plate for 24 hrs at 37°C. Observe the results, the growth of colonies is visible. The colonies can be counted & the number of bacteria can be enumerated. The bacteria is measured in cell forming unit [CFU's/ml].

$$\text{SPC} = \frac{\text{No. of colonies} \times \text{dilution factor} \times 1000}{\text{Amount of sample taken}}$$

Test / Tutorial No. _____

Q3 3) Physico chemical characteristics of water
1) pH :- pH of water should be neutral from 6.5 - 8.5.

The waste from industries may contain chemical, dyes, organic matter which may change pH of water.

If the bicarbonate rate is high then the pH of water is alkaline.

2) coloure :-

The coloure of water can also change when the waste is released in water bodies.

3) odour :-

The odour of water also change as water get polluted. The algae growth ~~too~~ may also lead to hard odour.

4) taste :-

The taste of water also changes if the water is polluted and not treated properly.

NAAC Accredited 'A' Grade with CGPA 3.24, College with Potential for Excellence
by UGC, Star College by DBT, Govt. of India

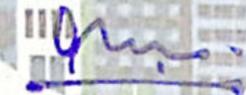

Department of
Microbiology
Certificate

This is to certify that Ms. Sayali Bhausahab Lad of B.Sc. I/II/III
Roll No. 209 has successfully completed the value added course on
"Waste water management" carried out in the Department of Microbiology,
Vivekanand College, Kolhapur during 26th Aug. 2019 to 1st Jan 2020
This certificate is awarded to him/her after passing theory and practical examination.

Mr. S. D. Gabale
