B. Sc. Part – I Semester -I STATISTICS

DSC-I: 2DSC03STA11: Descriptive Statistics I

Theory: 30 hrs.

Marks-50 (Credits: 02)

Course Outcomes - At the end of this course students will be able to:

CO1. Know scope of Statistics and sampling methods.
CO2. Compute descriptive statistics.
CO3. Compute moments, skewness, kurtosis and its interpretation.
CO4. Apply an appropriate measure in given situations/data.

Unit	Contents	Hours Allotted
1	**Introduction to Statistics & Measures of Central Tendency** 1.1 : Definition and scope of Statistics, raw data, Meaning of primary and secondary data. Qualitative data (Attributes): nominal and ordinal scale. Quantitative data (Variables): Interval and ratio scale, discrete and continuous variables. 1.2 : Concept of Central tendency, Statistical average, Requirements of good statistical average. 1.3 : **Arithmetic Mean (A.M)**: Definition, Properties: a. Effect of change of origin and scale, b. Sum of deviation of observations from A.M is zero. c. Sum of squares of deviation of observations from A.M is minimum. d. Combined mean of k series (prove for two series and generalize for k series) Weighted A.M. 1.4 : **Geometric Mean (G.M)**: Definition, Properties: i) G. M. of pooled data (for two groups), ii) G. M. of ratio of two series, is the ratio of their G. M's. 1.5 : **Harmonic Mean (H.M.)**: Definition, Relation: A.M ≥ G.M ≥ H.M (proof for n =2 positive observations). 1.6 : **Median**: Definition, Derivation of formula for grouped frequency distribution. 1.7 : **Mode**: Definition, Derivation of formula for grouped frequency distribution. Empirical relation between Mean, Median and Mode. Graphical method of determination of Median and Mode. 1.8 : **Partition values** Quartiles, Deciles and Percentiles, Box Plot. 1.9 : Comparison between averages in accordance with requirements of good average. 1.10: Situations where one kind of average is preferable to others.	**15**

2	**Measures of Dispersion, Moments, Skewness and Kurtosis** 2.1 : Concept of dispersion, Absolute and Relative measures of dispersion, Requirements of a good measure of dispersion. 2.2: **Range:** Definition, Coefficient of range. 2.3: **Quartile Deviation (Semi-interquartile range):** Definition, Coefficient of Q.D. 2.4: **Mean Deviation:** Definition, Coefficient of M.D., Minimal property of M.D. 2.5: **Mean Square Deviation (**M.S.D.**):** Definition, Minimal property of M.S.D. 2.6**:** **Variance and Standard Deviation:** Definition, Effect of change of origin and scale, combined variance (proof for two groups). 2.7 : **Coefficient of Variation:** Definition and use. 2.8 : Comparison of S.D. with other measures. 2.9 : **Moments:** Raw moments (μ_r') and Central moments (μ_r) for ungrouped and grouped data. 2.10 : Effect of change of origin and scale on central moments, relation between central moments and raw moments (up to 4^{th} order). 2.11 : Sheppard's corrections. 2.12 : **Skewness:** Concept of skewness of a frequency distribution, Types of skewness. 2.13 : Bowley's coefficient of skewness, Karl Pearson's coefficient of skewness, Measure of skewness based on moments. 2.14: **Kurtosis:** Concept of kurtosis of a frequency distribution, Types of kurtosis. 2.15: Measure of kurtosis based on moments.	**15**

B. Sc. Part – I Semester -I STATISTICS

DSC-II: 2DSC03STA12: Elementary Probability Theory

Theory: 30 hrs.

Marks-50 (Credits: 02)

Course Outcomes - At the end of this course students will be able to:

CO1. Distinguish between Deterministic and Non-deterministic experiments.

CO2. Understand the basic concepts of probability, conditional probability and independence of events.

CO3. Learn theorems on probabilities and compute probabilities.

CO4: Understand the concept of discrete random variable, probability distributions and mathematical expectation.

Unit	Contents	Hours Allotted
1	**Probability** 1.1 : Concepts of experiments and random experiments. 1.2: Definitions: Sample space, Discrete sample space (finite and countably infinite). 1.3: Event, Types of events: Elementary event, Compound event, Impossible events, Certain event, favorable event Algebra of events (Union, Intersection and Complement). 1.4: Definitions of Mutually exclusive events, Exhaustive events, 1.5: Power set |P(Ω) (sample space consisting at most 3 sample points). 1.6: Symbolic representation of given events and description of events in symbolic form. 1.7: Illustrative examples. 1.8: Equally likely outcomes (events), apriori (classical) definition of probability of an event. Equiprobable sample space, simple examples of computation of probability of the events based on Permutations and Combinations. 1.9: Axiomatic definition of probability with reference to a finite and countably infinite sample space. 1.10: Proof of the results: i) $P(\Phi) = 0$, ii) $P(A^c) = 1 - P(A)$, ii) $P(A \cup B) = P(A) + P(B) - P(A \cap B)$ (with proof) and its generalization (Statement only). iii) If $A \subset B$, $P(A) \leq P(B)$, v) $0 \leq P(A \cap B) \leq P(A) \leq P(A \cup B) \leq P(A) + P(B)$. 1.11: Definition of probability in terms of odd ratio. 1.12: Illustrative examples. 1.13: Definition of conditional probability of an event. 1.14: Multiplication theorem for two events. Examples on conditional probability. 1.15: Partition of sample space. 1.16: Idea of Posteriori probability, Statement and proof of Baye's theorem, examples on Baye's theorem.	**15**

2	**Independence of Event & Mathematical Expectation of discrete random variable (on finite sample space)** 2.1: Concept of Independence of two events. 2.2: Proof of the results: If A and B are independent then, i) A and B^c , ii) A^c and B , iii) A^c and B^c are independent. 2.3: Pairwise and Mutual Independence for three events. 2.4: Elementary examples. 2.5: Definition of discrete random variable, Probability mass function (p.m.f.) and cumulative distribution function (c.d.f.) of a discrete random variable, Properties of c.d.f. (statements only), Probability distribution of function of random variable, Median and Mode of a univariate discrete probability distribution. 2.6: **Mathematical Expectation**: Definition of expectation of a random variable, expectation of a function of a random variable. Results on expectation, i) E (c) = c, where c is a constant, ii) E (aX + b) = a E (X) + b, where a and b are constants, 2.7: Definitions of mean, variance of univariate distributions. Effect of change of origin and scale on mean and variance. Definition of raw, central moments. Pearson's coefficient of skewness, kurtosis, Definition of probability generating function (p.g.f.) of a random variable. Effect of change of origin and scale on p.g.f. Definition of mean and variance by using p.g.f. 2.8: Examples.	**15**

Note: 1. In theory examination, the weightage to the numerical problems should **not exceed 40%.**
2. Students can use scientific calculators in theory examination.

DSC STA-PR-I: 2DSC03STA19

DSC Statistics Practical I (Credits 02)

Course Outcomes - At the end of this practical paper students will be able to:

CO1. Use various graphical and diagrammatic techniques and Interpret.

CO2. Compute descriptive statistics.

CO3. Computation of Moments, Skewness, Kurtosis & its interpretation.

CO4. Computation of various probabilities.

Sr. No.	Title of the Experiment
1	Graphical representation of frequency distribution.
2	Measures of Central Tendency I (Ungrouped data)
3	Measures of Central Tendency II (Grouped data)
4	Measures of Dispersion I (Ungrouped data)
5	Measures of Dispersion II (Grouped data)
6	Moments, Skewness and Kurtosis I (Ungrouped data)
7	Moments, Skewness and Kurtosis II (Grouped data)
8	Probability
9	Conditional Probability & Baye's Theorem
10	Independence of events
11	Univariate Probability Distributions I
12	Univariate Probability Distributions II

B. Sc. Part – I Semester -II STATISTICS

DSC-III: 2DSC03STA21: Descriptive Statistics II

Theory: 30 hrs.

Marks-50 (Credits: 02)

Course Outcomes - At the end of this course students will be able to:

CO1. To compute correlation coefficient and its interpretation.

CO2. To compute regression coefficients and regression lines.

CO3. Analyze data pertaining to attributes and interpret the results.

CO4. Understand the need of vital statistics and concepts of mortality and fertility.

Unit	Contents	Hours Allotted
1	**Analysis of Bivariate Data** 1.1: **Correlation:** Bivariate Random variable (X, Y), Bivariate data, Formation of bivariate frequency distribution. 1.2: Definition and properties of Covariance of (X,Y).(Effect of change of origin and scale on covariance) 1.3: Concept of correlation between two variables, Types of correlation. 1.4: Scatter diagram, its utility. 1.5: Karl Pearson's coefficient of correlation (r): Definition, Computation for ungrouped and grouped data. **Properties:** i) $-1 \leq r \leq 1$, ii) Effect of change of origin and scale. iii) Interpretation when $r = -1, 0$ &1. 1.6: Spearman's rank correlation coefficient: Definition, Computation (for with and without ties). Derivation of the formula for without ties and modification of the formula for with ties. 1.7: **Regression**: Concept of regression, Lines of regression, Fitting of lines of regression by the least square method. 1.8: Regression coefficients (b_{xy}, b_{yx}) and their geometric interpretations, Properties: i) $b_{xy} \times b_{yx} = r^2$, ii) $b_{xy} \times b_{yx} \leq 1$, iii) $(b_{xy} + b_{yx}) / 2 \geq r$, iv) Effect of change of origin and scale on regression coefficients, v) the point of intersection of two regression lines. 1.9: Derivation of acute angle between the two lines of regression. 1.10: Coefficient of determination. 1.11: Examples.	**15**
2	**Theory of Attributes & Demography:** 2.1: **Attributes:** Notation, dichotomy, class frequency, order of class, positive and negative class frequency, ultimate class frequency, fundamental set of class frequency, relationships among different class frequencies (up to three attributes). 2.2: Concept of Consistency, conditions of consistency (up to three attributes). 2.3: Concept of Independence and Association of two attributes. 2.4: Yule's coefficient of association (Q): Definition & interpretation. 2.5: Coefficient of colligation (Y): Definition, interpretation.	**15**

	2.6: Relation between Q and Y, $Q = 2Y/(1+Y^2)$, $\|Q\| \geq \|Y\|$. 2.7: Illustrative examples. 2.8: **Demography:** Introduction and need of vital statistics 2.9: Mortality rates: Crude death rate (CDR), Specific Death Rate (SDR), Standardized Death Rate (STDR). 2.10: Fertility Rates: Crude Birth Rate (CBR), Age Specific Fertility Rate (ASFR), General Fertility Rate (GFR), Total Fertility Rate (TFR). 2.11: Reproduction Rate: Gross Reproduction rate (GRR), Net Reproduction Rate (NRR). 2.12: Lifetable, Notations and terminology, Expectation of life, Stationary population, Stable population, Central Mortality Rate, Force of Mortality, Assumptions, Description and construction of life table, Uses of life table.

B. Sc. Part – I Semester -II STATISTICS

DSC-IV: 2DSC03STA22: Discrete Probability Distributions

Theory: 30 hrs.

Marks-50 (Credits: 02)

Course Outcomes - At the end of this course students will be able to**:**

CO1. Apply some univariate standard discrete probability distributions to different situations.

CO2. Obtain mathematical expectation of different distributions.

CO3. To learn relation between different discrete distributions.

CO4. Concept of bivariate random variable, probability distributions.

Unit	Contents	Hours Allotted
1	**Standard Discrete Probability Distributions:** 1.1 : Idea of one point, two-point distributions and its mean and variance. 1.2 : **Discrete Uniform Distribution**: p.m.f., mean and variance. 1.3 : **Bernoulli Distribution:** p.m.f., mean, variance, distribution of sum of independent and identically distributed Bernoulli variables 1.4: **Binomial Distribution:** Binomial random variable, p.m.f. with parameters (n, p), Recurrence relation for successive probabilities, mean, variance, mode, skewness, p.g.f. and additive property of binomial variates. Examples. 1.5: **Hyper geometric Distribution:** p.m.f. with parameters (N, M, n), Computation of probability of different events, situations where this distribution is applicable, Recurrence relation for successive probabilities, mean and variance of distribution assuming $n \leq N - M \leq M$, approximation of Hypergeometric to Binomial. Examples. 1.6 **Poisson Distribution:** Definition of Poisson distribution with parameter λ. Mean, variance, probability generating function (p.g.f.). Recurrence relation for successive probabilities, Additive property of Poisson distribution. Poisson distribution as limiting case of Binomial distribution, examples.	**15**

2	**Bivariate Probability Distribution (Defined on finite sample space) & Mathematical Expectation (Bivariate random variable)**: 2.1: Definition of bivariate discrete random variable (X, Y) on finite sample space. 2.2: Joint p.m.f., and c.d.f., Properties of c.d.f. (without proof). 2.3: Computation of probabilities of events in bivariate probability distribution. 2.4: Concepts of marginal and conditional probability distributions, independence of two discrete r.v.s. 2.5: Examples and problems. 2.6: Definition of expectation of functions of r.v. in bivariate distribution. 2.7: **Theorems on expectations**: (i) $E(X+Y) = E(X) + E(Y)$ (ii) $E(XY) = E(X)\cdot E(Y)$ when X and Y are independent 2.8: Expectation and variance of linear combination of two discrete r.v.s. 2.9: Definition of conditional mean, conditional variance, covariance and correlation coefficient, Cov (aX+bY, cX+dY). 2.10: Distinction between uncorrelated and independent variables. 2.11: Joint p.g.f, proof of the p.g.f. of sum of two independent r.v.as the product of their p.g.f. 2.12: Examples and problems.	**15**

Books Recommended:

1. Bhat B. R., Srivenkatramana T and Madhava Rao K. S. (1997): Statistics: a Beginner's Text, Vol. II, New Age International (P) Ltd.
2. Edward P. J., Ford J. S. and Lin (1974): Probability for Statistical Decision-Making, Prentice Hall.
3. Goon A. M., Gupta M. K., Das Gupta B. (1999): Fundamentals of Statistics, Vol.II, World Press, Calcutta.
4. Mood A. m., Graybill F. A. and Boes D. C. (1974): Introduction to the Theory of Statistics, McGraw Hill.
5. Hogg R. V. and Crag R. G.: Introduction to Mathematical Statistics Ed.4.

8. Rohatgi V. K. and Saleh A. K. Md. E. (2002): An Introduction to probability and statistics. John wiley & Sons (Asia)

Note: 1. In theory examination, the weightage to the numerical problems should **not exceed 40%.**
2. Students can use scientific calculators in theory examination.

DSC-STA-PR-II: 2DSC03STA29

DSC Statistics Practical II (Credits 02)

Course Outcomes - At the end of this practical paper students will be able to:

CO1. Compute correlation coefficient, regression coefficients.
CO2. Analyze data pertaining to attributes and interpret the results.
CO3. Apply various discrete distributions.
CO4. Compute mortality and fertility rates.

Sr. No.	Title of the Experiment
1.	Correlation I (Karl Pearson's correlation coefficient)
2.	Correlation II (Spearman's Rank correlation coefficient)
3.	Regression I(Ungrouped data)
4.	Regression II (Grouped data)
5.	Attribute I (Missing frequencies, Consistency)
6.	Attribute II (Association and Independence)
7.	Demography I (Mortality Rate)
8.	Demography II (Fertility Rate)
9.	Applications of Discrete Uniform & Binomial distribution
10	Applications of Hypergeometric & Poisson distribution
11.	Bivariate Discrete distribution I
12.	Bivariate Discrete distribution II

Note:

i. Calculations using statistical formulae should be done by scientific calculator and verify by using MS-EXCEL.
ii. Computer printouts should be attached to the journal if necessary.
iii. Student must produce the laboratory journal along with the completion certificate signed by Head of Department, at the time of practical examination.

OEC MTS-PR-I: 2OEC03MTS12 Basic Statistics I

PRACTICAL: 60 hrs.

Marks-25 (Credits: 02)

Course Outcomes - At the end of this course students will be able to**:**

CO1.Prepare instruments for the data collection.

CO2.Learn basic concepts of sample survey & different methods of sampling.

CO3.Visualize data diagrammatically.

CO4. Visualize data graphically.

Unit No.	Content	Hours Allocated
1	**Data Visualization & Presentation of Data** 1.1: Introduction –Data (qualitative and quantitative data) 1.2: Types of Characteristics: different scales of measurement Attributes and Variables, Collection and Organization of Data (Primary data, secondary data, Time series data, Cross-sectional data, Failure data). 1.3: Basic Terms: Class interval, class frequency, class mark, class width, Classification, Methods of Classification, Tabulation, Frequency Distribution, Discrete and continuous frequency distribution, Cumulative Frequencies, Relative frequency. 1.4: Diagrammatic Representation of Statistical Data –Bar diagram, subdivided bar diagram, Multiple bar diagram, Box plot, Pie chart, Scatter diagram. 1.5: Graphical Representation of Statistical Data-Histogram, Ogive curves, Frequency polygon and frequency curves. 2.1: Population, Sample, Sampling unit, Sampling frame, Sampling method, Census method. 2.2: Advantages and disadvantages of sampling methods **Probability Sampling:** SRS, stratified random sampling,	**15**
2	**Measures of Central Tendency** 1.1: **Introduction to statistics:** Meaning & scope of statistics 1.2: **Types of Data**: Raw data, Data, Qualitative & Quantitative data, Primary data and Secondary data, Discrete and Continuous data. **Measures of Central Tendency** 1.3: Concept of Central Tendency. 1.4: Arithmetic Mean: Definition, Combined mean. 1.5: Positional Averages: Median and Mode, Determination of mode and median by graph, Partition values (Quartiles and Deciles). 1.6: Empirical relation between Mean, Median and Mode. 1.7: Numerical examples.	**15**

Reference Books:

1. Gupta V.K. & Kapoor S.C. Fundamentals of Mathematical Statistics- Sultan &Chand
2. Gupta S. P. (2002): Statistical Methods, Sultan Chand and Sons, New Delhi.
3. W. G. Cochran- Sampling Techniques Wiley Publication third edition.

List of Practicals:

Sr. No.	Title of Experiment
1	Formation of Frequency distribution
2	Diagrammatic representation I (bar diagram, multiple ,subdivided Bar)
3	Diagrammatic representation II (pie diagram, scatter diagram, box plot)
4	Graphical representation I (Histogram, frequency polygon, frequency curve)
5	Graphical representation I (less than and greater than ogive curves)
6	Sampling (SRS and Stratified sampling)
7	Measures of central tendency: I
8	Measures of central tendency: II
9	Diagrammatic & Graphical representation using MS- Excel
10	Measures of central tendency using MS- Excel

B. Sc. Part – I Semester -I STATISTICS

OEC MTS-PR-II: 2OEC03MTS22: Basic Statistics II

Marks-50 (Credits: 02) (60 hrs.)

Course Outcomes - At the end of this course students will be able to**:**

CO1. Learn basic concepts in statistics.

CO2. Compute descriptive statistics.

CO3. Understand the concept of bivariate data.

CO4. Analyze data by using correlation and regression.

Unit No.	Content	Hours Allocated
1	**Measures of Dispersion:** 1.8: Concept of Dispersion 1.9: Absolute and Relative measures of dispersion. 1.10: Range- Definition, Coefficient of Range. 1.11: Quartile Deviation (Q.D.) Definition, Coefficient of Q.D. 1.12: Mean Deviation (M.D.): Definition of M.D. about Mean, Coefficient of M.D. about mean. 1.13: Standard Deviation (S.D.) and Variance: Definitions, Coefficient of S.D.,Combined S.D. for two groups. 1.14: Coefficient of Variation (C.V.): Definition and its uses. 1.15: Numerical Examples.	**15**
2	**Analysis of Bivariate Data:** **Correlation:** 2.1: Concept and types of correlation. 2.2: Methods of studying correlation, scatter diagram, Karl Pearson'scorrelation coefficient (r), computation of r for ungrouped data, interpretation of r = -1, r =0, r=+1. 2.3: Spearman's rank correlation coefficient(R), computation of R (with and without tie). **Regression:** 2.4: Concept of regression. 2.5: Lines of regression, regression coefficients. Properties of regression coefficients (only statements) 2.7: Numerical examples on correlation and regression.	**15**

Reference Books:

1. Gupta V.K. & Kapoor S.C. Fundamentals of Mathematical Statistics- Sultan &Chand
2. Gupta S. P. (2002): Statistical Methods, Sultan Chand and Sons, New Delhi.

List of Practicals:

Sr. No.	Title of Experiment
1	Measure of Dispersion -I (ungrouped data)
2	Measure of Dispersion -II (grouped data)
3	Measure of Dispersion -III (C.V)
4	Correlation I (Karl Pearson)
5	Correlation II (Rank correlation)
6	Regression I
7	Regression II
8	Summary statistics using MS- Excel
9	Correlation and Regression using MS- Excel

Assessment Structure

Structure of Question Paper

Nature of Theory Question Paper

Instructions:

1) All questions are compulsory.

2) Figures to the right indicate full marks.

3) Use of scientific calculator is allowed.

Time: 2-hour **Total Marks: 40**

Question Number	Marks
Q.1. Choose correct alternative.	(8x1=8)
Q.2 Attempt any two. i) ii) iii)	(8x2=16)
Q.3. Attempt any four. a) b) c) d) e) f)	(4x4=16)

Evaluation Pattern for practical Course:

Marks Distribution of Practical (LAB) course: Total Marks: 25

Course	Experimental work	Journal assessment	Seminar/ Mini Project	Total Marks
Major	**20**	**05**	**5**	**25**
OE	**20**	**05**	**-**	**25**
